

# SMART LEARNING

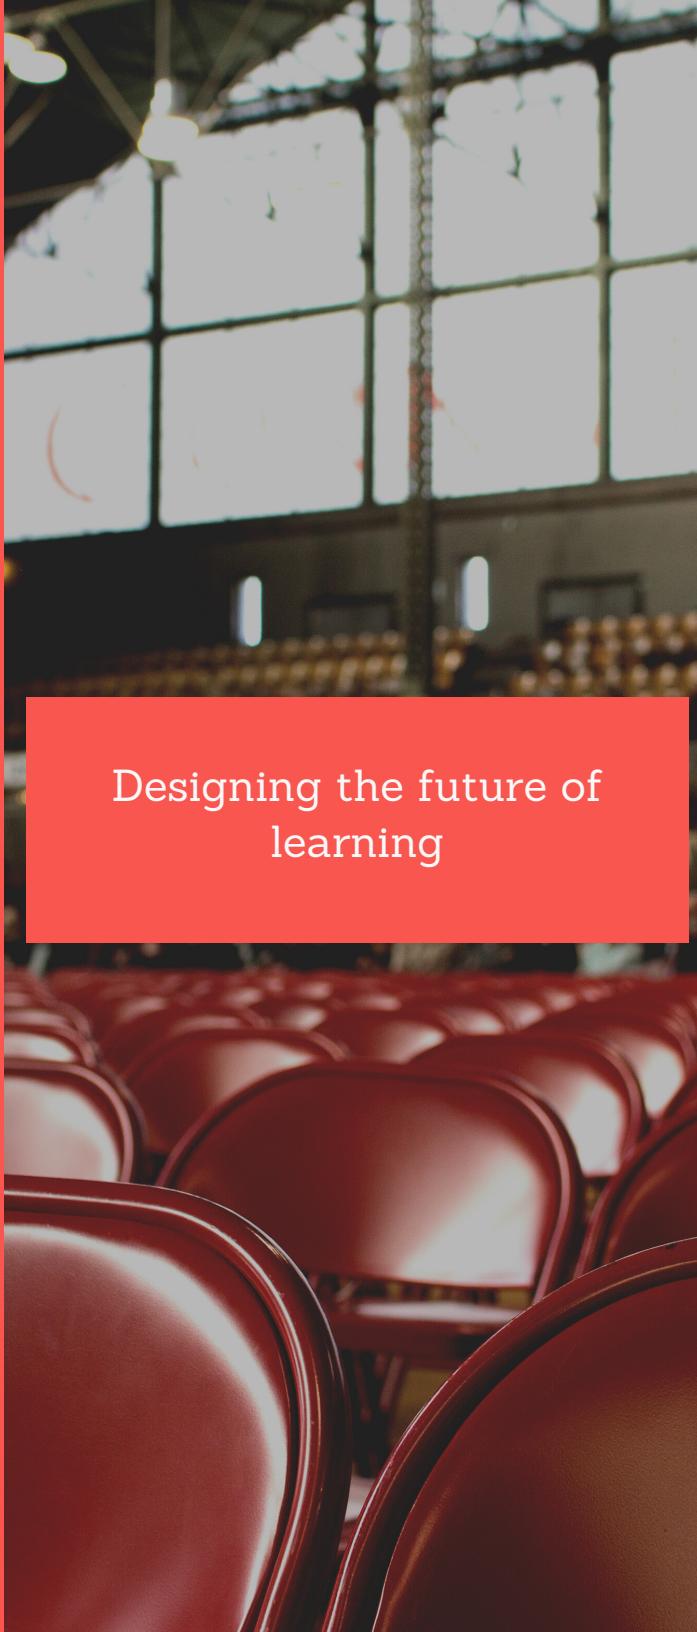

## OUR VISION

We seek to raise the quality and standard of online education.

Education gives us knowledge of the world around us. It develops in us a perspective of looking at life. It is the most important element in the evolution of the nation.

Without education, one will not explore new ideas. It means one will not be able to develop the world because without ideas there is no creativity and without creativity, there is no development of the nation.

We live in a world that is rapidly changing and developing, and we are constantly seeking to digitalize our daily activities, and one of the essential aspects of our daily life is education.

Designing the future of learning

## OUR SYSTEMS

Smart learning is a learning management system (LMS) software application for the administration, documentation, tracking, reporting, automation and delivery of educational courses, training programs, or learning and development programs. The project's concept emerged directly from e-Learning.

Our systems are designed to identify training and learning gaps. The software is focused on online learning delivery but supports a range of uses, acting as a platform for online content, including courses. We also offer classroom management for instructor-led training.

The COVID-19 pandemic has resulted in schools shutting all across the world. Globally, over 1.2 billion children are out of the classroom.

As a result, education has changed dramatically, with the distinctive rise of e-learning, whereby teaching is undertaken remotely and on digital platforms.

Research suggests that online learning has been shown to increase retention of information, and take less time, meaning the changes coronavirus have caused might be here to stay.
